Talio: Your personal Task List Organizer

Stakeholders:
- **Board user:** Any person that creates tasks in the board
- **Board manager:** A person that manages the DB

Terminology:
- **Board**: The whole page that holds all tasks. In the more advanced features of the app there are multiple boards so that every user has their own taskboard.
- **List**: Pinned on the board and holds the tasks that the user chooses to put in them.
- **Card**: A single task.

Mocks:

At the bottom of the document we provided some mocks. They are ideas on how the UI could look and are not definitive.

Must Requirements:

As a board user I want:
- To be able to access the main public board without credentials
- To be able to enter the board at a later time and not lose progress
- To be able to drag and drop elements in the lists
- To be able to add and remove cards and lists
- To be able to create cards and lists

Should Requirements:

As a board user I want:
- To be able to access multiple boards using the appropriate credentials
- Have my own personal board that other users cannot modify without the appropriate credentials
- To be able to put description to my cards
- Specific subtasks within broader main card
- To be able to create tags and search them
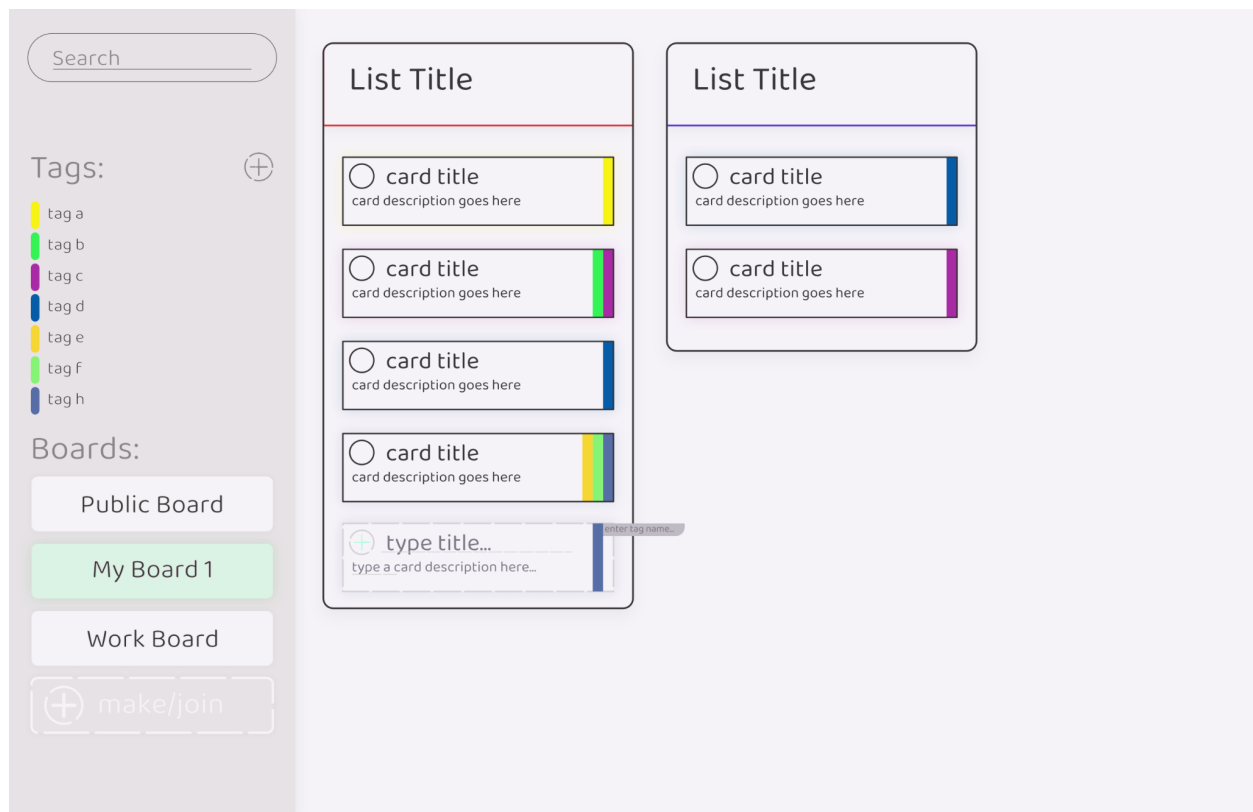

As a board manager I want:

- The users to be able to access the board only if they have the credentials necessary
- To create private boards and grant access to board users

Could Requirements:

As a board user I want:
- To be able to customise the colours
- To be able to use keyboard shortcuts
- To be able to make some boards write/read only

Mocks:

Create New Board
